The perfect light for every situation

Dual Color: Change of the color temperature with the light switch

The new Dual Color LED lamps from LEDON provide different light colors in one source for a needs-oriented lighting situation. No installation is required to change the color temperature. It is done through the standard light switch. Two dimmable versions of the innovative lighting solution are available, each with 800 lumens and 10 watts of power. They differ by changing their light color from neutral white to warm white (model *work*) and from warm white to ultra warm white (model *relax*).

From functional to emotional

The Dual Color LED lamp from LEDON in the version *work* provides the optimal lighting depending on day-to-day demands. Initially a neutral white light color of 4000 Kelvin acts stimulating and promotes concentration, for example, when working in the home office. By double-clicking the light switch the working atmosphere immediately changes to a cozy lighting ambience with a warm white color temperature of 2700 Kelvin.

Can it be a little more comfortable?

The Dual Color LED lamp from LEDON in the version *relax* offers the perfect lighting for comfort-oriented applications. Warm white 2700 Kelvin stand for a light color with feel-good character. When needed it turns to extra warm 2000 Kelvin to create a light atmosphere of a burning candle. The change of color is also done via the conventional light switch.

Sustainable Light

The perfectly shaped lamps of the Dual Color Series offer in addition to its innovative features a very good light quality and an outstanding light distribution. Very high energy savings in combination with a long lifetime of 25,000 hours make the lighting solutions of LEDON to the most sustainable lighting products on the market.
